

Bioinformatitian position at the Group of Biology of Reproduction

Institute of Marine Sciences, Barcelona (ICM-CSIC)

<http://www.cmima.csic.es>

The Group of Biology of Reproduction is seeking a highly motivated bioinformatitian to join our research team at the Institute of Marine Sciences (ICM-CSIC) by the beginning of 2020. The person will work in a stimulating project to study the epigenetic marks in the zebrafish and European sea bass genomes caused by the interactions of the immune and reproduction systems.

Candidates should hold a Master's degree in Computational Biology, Genetics, Aquaculture or similar with high qualifications in both Degree and Master studies. The position is funded by a one-year contract and continued funding will depend on the competence of the candidate. It is also possible to do PhD studies.

The proposed project involves working *in silico* analysis by handling bioinformatics data from high throughput sequencing (miRNA, metabolomic, RRBS and Single-cell). Candidates with working experience in R and Python environment are especially encouraged to apply. The position requires good organizational skills, independence and ability to work well with others.

Application

Please send your CV (including qualifications) and a brief motivation letter before 15th of December 2019 to: lribas@icm.csic.es.
